#### The BAF management process

The Board assigns each strategic objective to a lead assurance committee for regular review. The role of the lead assurance committee is to:

- Review the assurance rating, based on evidence provided in reports from the lead executives, and recommend any changes to the Board
- Evaluate reports and risk assessments provided by the lead executives against each area of risk (as part of their regular work programme) and rate the level of assurance that can be given to the Board
- Identify any gaps in assurance and ensure these are addressed with the lead executive for future meetings of the committee ٠
- Identify any gaps in primary controls and ensure the lead executive has appropriate plans in place to address them

To facilitate this process, each lead assurance committee will need to receive regular reports from lead executives which provide sufficient management information and analysis of relevant key risks including an up to date corporate risk assessment, to enable the committee to make a judgement as to the level of assurance that can be provided to the Board.

All reports to assurance committees should first have been reviewed and approved by the lead executive.

#### Key to controls

Primary Controls – Interventions closest to risk/department Secondary controls – Organisational oversight that would identify deviation Tertiary controls – Third party – independent oversight

Key to committee assurance ratings:

Green = Positive assurance: the Committee is satisfied that effective controls are definitely in place and appropriate assurances are available

Amber = Inconclusive assurance: the Committee believes effective controls are in place but assurances are uncertain and/or possibly insufficient

Red = Negative assurance: the Committee is not satisfied that effective controls are in place and/or appropriate assurances are not available to Board

#### Excellence in rural healthcare
