

Research & Innovation

Staff Vision

Safety

Clinical Research aims to inform safer, effective treatments to enhance patient care. Research will be conducted by trained experienced staff guided by UK Policy Framework for Health and Social Care Research (2017), Good Clinical Practice and Medicines for Human Use (Clinical Trials) Regulations 2004.

We aim to enhance our quality governance systems and continue to develop our working processes to provide systematic and streamlined delivery of clinical trials.

Respect

Research respects people's rights and wishes and should never be coercive.

Patients will be provided with comprehensive information about Research and given time to ask questions and make informed choices about their participation. The patient decision will always be respected.

Staff involved in research have a duty to respect trial participants' rights, dignity and beliefs.

Patient-Centred

Research is continually improving and changing healthcare systems and processes. We will work towards implementing the 2021 Research & Innovation Strategy leading quality and innovation in patient-centred healthcare services.

We aim to ensure that all patients are informed about and offered the opportunity to take part in research that is relevant to them.

Excellence in Rural Health

We will promote the opportunities to deliver and disseminate Research across Lincolnshire as we work in collaboration with different healthcare providers.

The people of Lincolnshire will have the opportunity to participate and invest in the future of their healthcare providing long term benefits to the wider community.

Compassion

Patients are at the heart of research and we pledge to deliver research holistically, involving patients in research as part of their healthcare journey.

We will ensure that we listen to research participants and value their contributions and participation in clinical research to improve healthcare in the future.
