

## Clinical transformation support to the Divisions

To support the Divisions in the new TOM structure the Clinical Strategy Transformation team will provide support in the following areas:

### Clinical Strategy & Transformation

- Working in partnership with the Divisions to develop and regularly refresh the clinical strategy for all clinical services provided by ULHT
- Ensuring the Divisions are kept updated in relation to the system wide clinical transformation plans being led by the STP and ASR (Acute Services Review)
- Supporting the Divisions to implement/deliver the output from the ASR following consultation with the public, together with delivery / implementation of the ULHT clinical strategy for all other clinical services outside of the ASR

### Clinical Service Review

- The team will support all Clinical Teams to review their services from the perspective of; access, deliverability, quality and financial improvement, with the outcome from each review being a clinical service blueprint for the following 3-year period, supported by a confirmed action plan
- Progress against delivery of these plans will be overseen by the Clinical Transformation Steering Group

### Getting it Right First Time

- The Clinical Strategy Transformation Team will manage the working relationship between ULHT and the National GIRFT team, to ensure that all requests for data and information from ULHT is delivered appropriately
- The team will coordinate the GIRFT review visit programme between the national GIRFT Team and the ULHT Clinical Specialty Teams
- Progress against delivery of plans will be managed by the team and shared on a regular basis
- The actions resulting from the GIRFT reviews will be included as part of the “blue print” for the clinical service, so that all actions from the clinical service review process and the GIRFT review process are contained within one action plan.

### ULHT Clinical Transformation Steering Group

The team will support the Medical Director to run the ULHT Clinical Transformation Steering Group, which is the formal governance forum for Clinical Transformation within ULHT. The Divisions are represented on the Group from both a clinical and management perspective, and the group links in directly with the STP and ASR to ensure knowledge is obtained and shared in relation to system wide clinical transformation programmes of work.
