

Sepsis Box.

All ward areas have a 'sepsis box' which contain all the essential equipment need to treat a septic patient (apart from IV antibiotics as they have to be double locked away)

Contents of box:

- Rebreathe o2 Mask
- IV fluids
- IV giving set
- Blood taking and cannulation equipment
- Blood gas syringe
- Blood culture bottles
- Blood and microbiology forms
- Sterile gloves

The boxes have been designed to make the process of treating the septic patient more quickly. The boxes require restocking after each patient use.
